**Quantifying Realism**

**Alan Chalmers**

# The need for realism

- Archaeological sites can be easily reconstructed on a computer
- Such “pretty pictures” can be misleading
- Quantifiable realism is *essential* if such reconstructions are to be useful tools for the archaeologist

# Different fuel types

Modern  
lighting

Tallow  
candle

Olive  
oil

With  
salt

With water

# Ancient light sources

# Realistic flame

1997

# Image Quality

- **Why do we need high fidelity images?**
  - How do I know this image is real?

# No absolute truths

- **For sites which no longer exist or have yet been built**
  - User must have confidence in the image

# Photo-Realism vs High Fidelity

- **What is reality?**

- Image synthesis techniques allow us to simulate accurately light distribution within a scene  $\Rightarrow$  does NOT imply high fidelity visual appearance

# Problems

- **Lack of high fidelity due to:**
  - problems with modelling the scene
  - residual shortcomings of the rendering process
  - limited dynamic range of displays
  - extent to which human vision encodes such departures from perfect physical realism

# Image Quality Metrics

- **Trying to provide quantitative data**
  - real vs photograph
  - real vs synthetic
  - photograph vs synthetic

# The Human Visual System

Kirsten Cater

- *Good but not perfect!*

Flaws in the human visual system:

- Change Blindness
- Inattentional Blindness

Avoid wasting computational time

# Magic trick to demonstrate Inattentional Blindness

- Please choose one of the six cards below.

Focus on that card you have chosen.

# Magic trick (2)

- I've shuffled the cards and removed the one which I think was your card.

Can you still remember your card?

# Magic trick (3)

- Here are the remaining five cards, is your card there?

Did I guess right? Or is it an illusion?

# Magic trick - Explanation

- You just experienced *Inattentional Blindness*
- **None** of the original six cards was displayed!

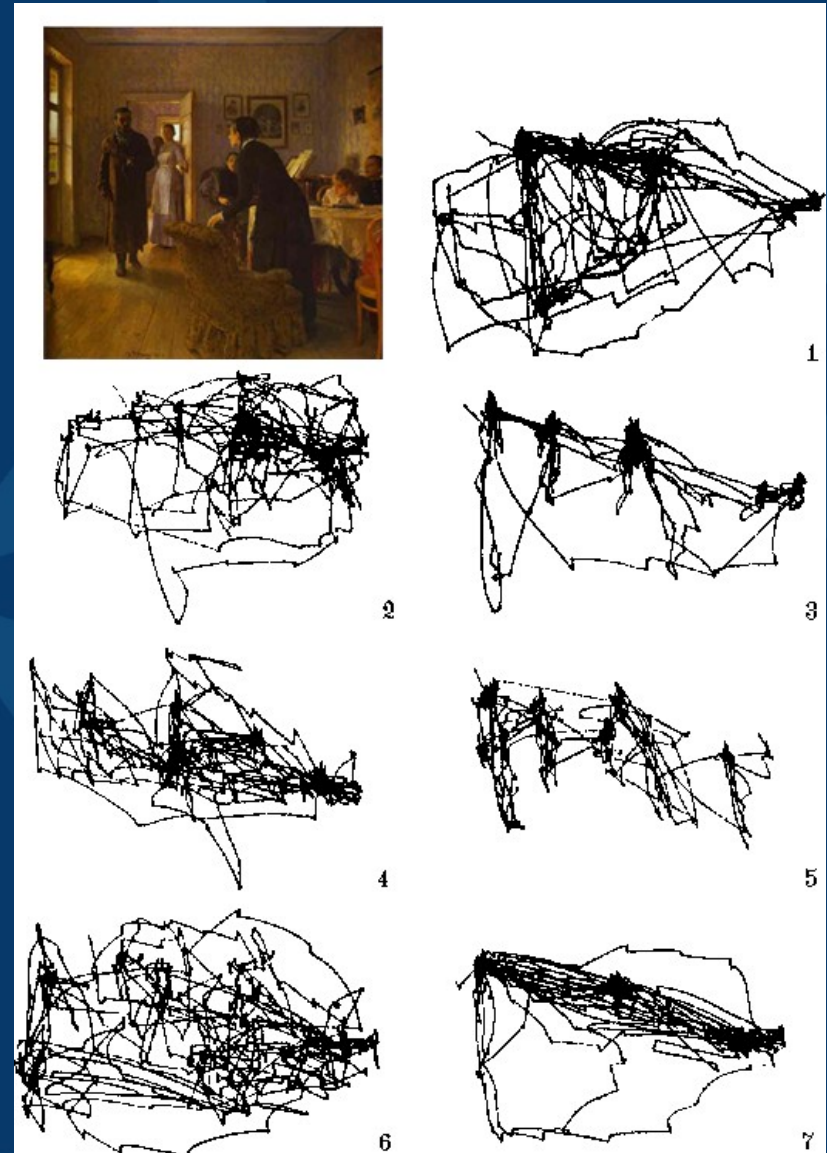

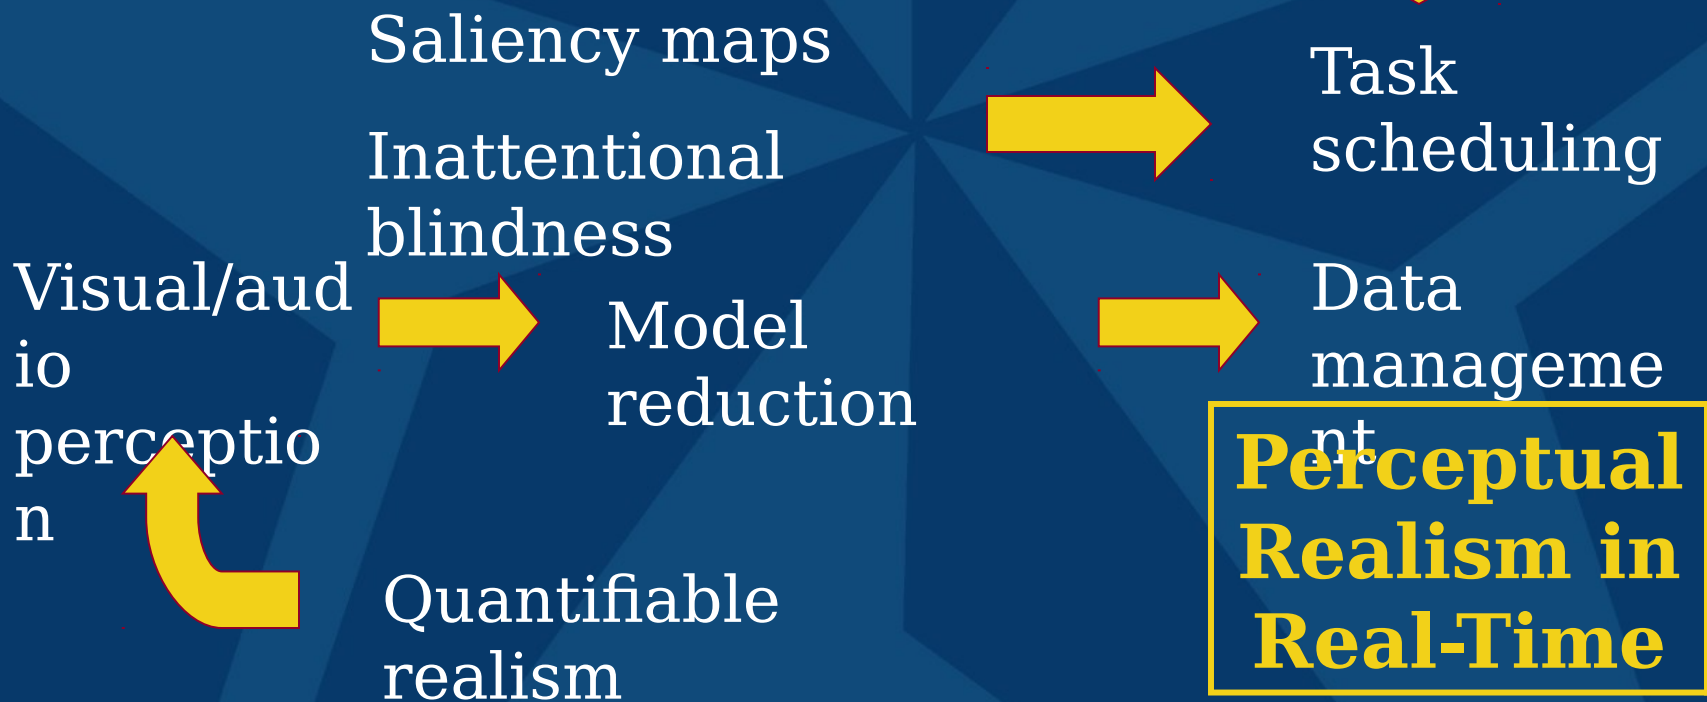

# Tracking eye movements

- **Bottom up**
  - Saliency maps
- **Top down**
  - Inattentional blindness

Yarbus  
1967

# Putting it all together

# Summary

## ***It's all about Lighting!***

- High fidelity reconstructions of *your* sites
- Unique wealth of display & research opportunities
